

➔ Example of bodyParser (read post form data)

Middle wearer of body Parser ➔ `app.use(bodyParser.urlencoded({extended:true}))`

###1 : index.js

```
//import module
let express = require('express');
let bodyParser = require('body-parser')

// middleware set
let app = express()
app.set('view engine', 'ejs')
app.use(bodyParser.urlencoded({extended:true}))

// route route (here display add form fields)
app.get('/', (req, res)=>{
  res.send('<a href="add-page">Add File</a>')
})

app.get('/add-page', (req, res)=>{
  res.render('add-file')
})

app.post('/add-page', (req, res)=>{
  // here read post for data
  let data = {
    pageTitle : req.body.pagetitle,
    pageDetails : req.body.pagedetails
    // Note :(pagetitle, pagedetails) are name of form input field name
    // if you want view your data then view console.log
  }
  console.log(data);
  res.redirect('/')
})

app.listen(200, ()=>{
  console.log('200 Port Working')
})
```
